

Snowy River ecoTimbers - Victorian Messmate

Snowy River ecoTimbers produce finely crafted flooring, becoming the ultimate expression of your personal lifestyle. We manufacture unique timber products steeped in Australian heritage and history that bring warmth and originality to your home.

Victorian Messmate (*Eucalyptus obliqua*) is a favourite species used for over two centuries where strength and durability is demanded and one that is increasingly attracting the interest of architects. Messmate's blonde / brown appearance lends itself to soft tones in modern environments. The long and even grain of Messmate Classic is often used where a clean and coastal feel is the desired appearance. This is contrasted by Messmate Antique (used in the Constructive Building "Isaacs Remodelling Project" that won the MBA "Best Remodelling Project under \$200,000") that exhibits all the natural features of the tree in its growing cycle. The affect is a floor filled with warmth and character, a floor that makes an immediate connection between the inside of the house and the outside environment, a unique floor that attracts attention and comment, and a homely floor that begs the space to be lived in.

Snowy River ecoTimbers are supplied with timbers sourced from sustainably managed forests. These forests are harvested and supplied, in Victoria, by the State Government owned enterprise VicForests. Timber is sourced from these forests under strict "Codes of Forest Practice" to ensure future generations will enjoy the same forest values. "Your Future is our Future".
